OUR 4-STAGE CERTIFICATION APPROACH

- #### 1 Gap analysis and scope definition

We begin with a structured gap analysis that maps your current position against ISO 27001:2022 requirements. This produces a prioritised action plan and a realistic certification timeline based on your specific starting point, not a generic estimate.
- #### 2 ISMS development and risk assessment

We develop an Information Security Management System designed for your organisation's size, risk profile, and operational reality. Policies and controls are built to be owned and maintained by your team, not an enterprise framework retrofitted to your scale.
- #### 3 Controls implementation and internal audit

Annex A controls are implemented in order of risk and audit likelihood. We conduct an independent internal audit before your Stage 2 to surface gaps before your external auditor does, with a prioritised remediation plan, not a document filed for later.
- #### 4 Stage 1 and Stage 2 audit support

We prepare your documentation pack for Stage 1 and support your team through the Stage 2 on-site assessment. Post-certification, we provide a structured handover so your team can confidently maintain what was built.

WHAT YOU RECEIVE

Gap analysis and action plan	Risk assessment and treatment plan	Statement of Applicability
Full ISMS policy set	Internal audit report	Stage 1 and Stage 2 support

HOW WE OPERATE

Built for your scale

We do not retrofit enterprise frameworks to smaller organisations. The ISMS we build reflects your actual risk profile. First-time certification with one minor finding is an achievable outcome.

Sustainability by design

Every policy and control is built to be owned by your team. The goal is a framework that works without ongoing external dependency, and works even better with us alongside it.

Ongoing partnership available

Certification is the beginning of a maintenance commitment. We offer surveillance audit preparation, standards updates, and continuous improvement support for certified organisations.

Pursuing ISO 27001 certification? Start with your current position.

A 30-minute call gives us a clear picture of where you are and what a realistic path to certification looks like for your organisation.
